

SEWTEC AUTOMATION

Track & Trace Systems

Track and trace systems are required by numerous industries through legislation to reduce illicit trade, counterfeits, and tax evasion. Our solutions combine automated coding and labelling systems with either manual packing, or fully automated end of line packaging.

- Unique codes are assigned at each stage of the packaging process
- Codes can be applied using laser, inkjet, or 'print and apply' technology
- Codes are verified, validated, and authenticated
- Accurate product serialisation with high levels of data integrity
- Production lines run with high efficiencies to maximise OEE

Zip bags

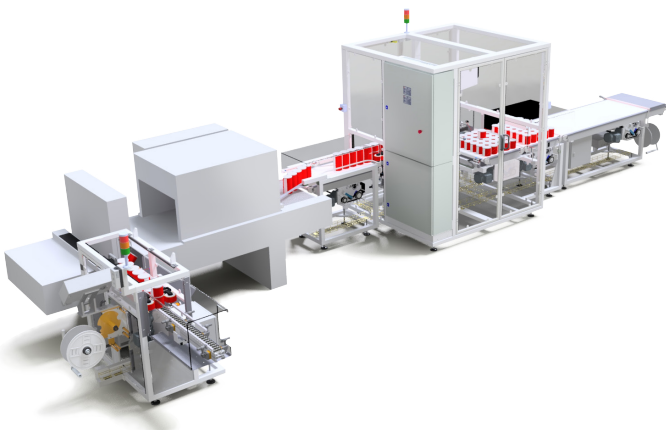

- Zip bag labelling with DMC codes
- Codes read and aggregated
- Zip bags collated into lane queues
- Operators manually load zip bags into cases
- Case label printed for manual application
- Barcode validation via hand scanner
- Fully automated label application, verification, and case packing available

Pouch bundles

- Pouch coding through bundle film
- Codes read and aggregated
- Bundles grouped for manual packing
- Case label printed for manual application
- Barcode validation via hand scanner
- Fully automated label application, verification, and case packing available

Containers

- Labelling on base of container
- Bundles of containers collated and labelled
- Bundles grouped for manual packing
- Case label printed for manual application
- Barcode validation via hand scanner
- Fully automated label application, verification, and case packing available
